(54) Title: PRODUCT CONVEYOR WITH LOAD-CARRYING PLATFORMS

(57) Abstract: The invention provides a device for conveying products along an endless conveying path, which device comprises a frame, an elongated flexible conveying element supported by the frame, which comprises links that are pivotable relative to each other about vertical pivots, load-carrying platforms each having a supporting surface at the upper side, which supporting surfaces jointly form a substantially closed, common supporting surface for the products, which load-carrying platforms are connected to the conveying element via supports and whose supporting surfaces adjoin each other at curved forward and rearward edges thereof, as well as drive means for driving the conveying element. The drive means comprise a driving element and said conveying element comprises an element driven by said driving element. The driven element forms part of the links of the conveying element.
